

ANGEL ANTONIO MATA ZAMORA

Software Developer | Embedded Systems & Web

+52 81 2701 6158 antoniomz769@gmail.com Monterrey, N.L. github.com/andynogamer

angelmata.netlify.app

Professional Profile

Software developer in training with hands-on experience in embedded systems and full-stack web development. Designed and implemented process automation solutions, including a system that replaced an 8-hour manual task with an instant data flow. Combines C++/Qt expertise for industrial machinery environments with experience in SPA architectures, relational databases, and data visualization (Power BI). Focused on systems integration and delivering functional, well-designed interfaces.

Professional Experience

Embedded Software Intern

April 2026 - Present

John Deere | San Pedro Garza García, N.L.

- Develop software layers for machinery displays using C++ and Qt.
- Utilize Vehicle Spy to simulate CANbus messages during the display development lifecycle.
- Work in Linux environments via virtual machines for software development and testing.
- Manage version control and continuous integration (CI/CD) workflows using Git and Azure DevOps.

Web Developer & UI Designer

2026 - Present

ascentramx (Freelance Project)

- Design high-fidelity prototypes in Figma for an aerial lift platform rental catalog.
- Develop a full-stack Single Page Application (SPA) utilizing PHP and core web technologies (HTML/CSS/JS).
- Configure web hosting and deploy the project to production environments.

Automation & Database Maintenance Intern

September 2024 - March 2025

Alestra

- Key Achievement: Designed and developed a real-time metrics automation system for ticket tracking, entirely eliminating manual data entry in Excel. This transformed a full-day (8-hour) administrative task into a 100% automated, instant information flow.
- Developed optimized Python scripts for internal process automation and advanced data analysis, significantly increasing operational efficiency.

- Designed and structured dynamic web dashboards in Angular and interactive corporate reports in Power BI for KPI monitoring, alongside preventive and corrective maintenance of relational databases (MySQL).

Academic Projects

Gestión LMAD

Full-stack Project

- Insurance claims management platform for vehicle policies, with insured client, adjuster, and supervisor roles.
- Angular SPA over a PHP REST API, with MySQL stored procedures, views, and triggers, plus server-side role validation on every endpoint.

MundialInfog

Full-stack Project

- Social platform for World Cup infographics: one forum per tournament, a moderation queue, likes, nested comments, and search.
- Custom PHP MVC, MySQL views and stored procedures, and a JSON API consumed with fetch.

Micro-Tanks Arena 3D

Web Game

- Browser-based tank arena built in Three.js without a game engine: horde-survival mode with FOV-aware AI, 1v1 duels over WebSockets, and custom AABB physics.
- Express and MySQL backend for account management and scores.

Education

Bachelor of Science in Multimedia and Digital Animation

Expected Graduation: June 2027

Universidad Autónoma de Nuevo León (FCFM)

Languages

Spanish: Native **English:** C1 Level **German:** A2 Level

Technical Skills

Languages & Frameworks

C++

Qt

Python

PHP

Angular

TypeScript

Express.js

Flutter

Tools

- Git
- Azure DevOps
- Vehicle Spy
- Figma
- Linux

Databases & BI

- MySQL
- Power BI
